Task: Employee Task Tracker
Create an **Employee Task Tracker** using **HTML**. The task should demonstrate proficiency with tables, forms, and HTML structure.

Requirements:

1. **Form to Assign Tasks:**
   - The form should allow input for:
     - Employee Name (text input)
     - Task Title (text input)
     - Task Description (textarea)
     - Due Date (date picker)
   - A submit button labeled **"Assign Task"** that adds the details to the table below.
2. **Table to Display Employee Tasks:**
   - The table should have the following structure:
     - Use **colspan** to merge cells for the "Task Details" column header spanning two sub-columns: "Task Title" and "Task Description."
     - Use **rowspan** to merge the "Employee Name" cell across multiple tasks assigned to the same employee.
   - The columns should be:
     - Employee Name
     - Task Details
       - Task Title
       - Task Description
     - Due Date
   - Include sample data in the table to illustrate the layout (e.g., one employee with multiple tasks).
3. **Styling and Layout:**
   - Use a clean and readable layout.
   - Highlight the table header using basic CSS or inline styling.
